TABLEAU DASHBOARD PROJECT

Sales Performance Analysis Dashboard

Student Name	Hanoch Shetty
Roll No.	T043
Class / Batch	TYIT
Subject	Data Visualization with Power BI and Tableau
Academic Year	2026

Submitted to: Prof. Sumitkumar Tripathi

1. Project Title

Sales Performance Analysis Dashboard using Tableau

2. Objective

The main objective of this project is to create an interactive dashboard using Tableau for analyzing sales performance. The dashboard converts raw data into meaningful visual information and helps users understand sales, profit, quantity, category-wise performance, regional performance, and time-based trends.

3. Project Description

This project uses Tableau to develop an interactive Sales Performance Dashboard. The dashboard contains key performance indicators (KPIs), charts, filters, and visualizations that allow users to explore the dataset. Users can analyze sales and profit based on different categories, regions, products, and time periods. The project demonstrates how data visualization can be used to identify patterns and communicate business information clearly.

4. Dataset Details

Parameter	Details
Dataset Name	Sales Performance Analysis
Source	https://www.kaggle.com/datasets/liaquatullah334/sales-performance-analysis
Number of Records	1000
Important Fields	Sales, Profit, Quantity, Category, Region, Date, Product

5. Tools & Technologies Used

- Tableau Desktop / Tableau Public
- Microsoft Excel / CSV (for dataset)
- Data Visualization and Dashboarding

6. Tableau Worksheets / Charts

Visualization	Purpose
KPI Cards	Total Sales, Total Profit and Total Quantity
Line Chart	Sales trend over time
Bar Chart	Sales by Category
Map / Bar Chart	Sales by Region or State
Top Products Chart	Top 10 products by sales
Interactive Filters	Year, Category, Region and other relevant fields

7. Calculated Fields

The following calculated fields can be used in the Tableau dashboard:

```
Total Sales = SUM([Sales])  
  
Total Profit = SUM([Profit])  
  
Profit Ratio = SUM([Profit]) / SUM([Sales])  
  
Average Sales = AVG([Sales])
```

8. Dashboard Screenshot

9. Key Insights

1. The Profit-To-Sales Ratio for this business is 5% which is very less. The ideal Profit-To-Sales Ratio should be greater than 10%. This means that the cost of products is less than necessary. This can be improved.
2. The North Region has the highest sales. Staffs can be increased in that Region based on the Hourly crowd strength. The sales of other Regions are comparable but efforts can be increased in the South, West and East Region by advertisements and other means.
3. Sales Rep Charlie has the least Sales in both the Years. Efforts can be made by understanding issues faced by the Sales Rep and addressing them. Sales Rep David and Eve have the Highest sales in both years, they can be appreciated for the work.
4. Product 1099 has the highest sales in both the years as compared to other products. Due diligence should be taken to ensure that it does not run out of stock and the stores always have sufficient quantities of Product 1099.
5. Electrical Appliances, Food and Furniture have lesser sales than clothing. Lucrative offers and discounts can be implemented for the products also ensuring that the clothing category does not face any issue of lack of supply.

10. Video Demonstration
